Recommendations:

1. Those operating or residing in Israel and Jordan on January 15 are advised to maintain heightened vigilance in the affected area, given the potential for aftershocks.
2. During an earthquake, those indoors are advised to drop to the ground and take cover under a sturdy object, such as a doorway or internal room with as few walls and windows as possible; hold

on until the shaking stops. If no such cover is available, shield your face and head while crouching near an inside corner.

3. If outdoors, move away from buildings, power lines, and wires. Drop to the ground and shield your face and head.
4. Pack sufficient batteries and flashlights in case of power outages. If possible, confirm that places of stay have working generators.
5. Disconnect all surge-prone devices such as computers, televisions, and appliances to prevent potential damage.
